

S10 Fig. Tissue-specific expression of genes captured by Pack-TYPE TEs. Heatmaps for the relative expression of genes captured by Pack-TEs; lists were obtained for each TE superfamily and genome, including genes that had significant BLAST matches to Pack-TYPE elements. The rows and columns of the heatmap were ordered by complete-linkage hierarchical clustering. The first three panels represent the genes matching Pack-TEs in maize (**A** - *PIF*, **B** - *hAT*, **C** - *CACTA*). The final panel (**D**) illustrates the expression of genes matching Pack-Mariner elements in rice.
